Lato aluminum skirting board profile is mostly preferred in all living areas and public areas such as offices, hotels, hospitals, schools, shopping malls and terminals. It has aluminum corner pieces with surface and color options identical to profiles. It covers the defects in floor and wall joints. It prevents dirt accumulation and harmful organisms to provide hygienic and healthy use for many years. With the hollow area in its design, it collects the telephone, electricity and internet cables to organize your environment. It is extremely durable and long-lasting since it is produced from high quality raw material and has thick walls. Unlike its competitors, it stands out with its coating thickness and quality of anodizing, and with its pretreatment application that provides resistance to corrosion in electrostatic powder painting. Lato modernizes living areas with its plain and minimal appearance. Lato aluminum skirting board profile can be easily installed by fixing the universal rear piece to the wall with screws and mounting the front cover profile with its snap lock system. Corners can be easily assembled using corner parts specially developed to prevent the need of angular cutting. Lato aluminum skirting board has matte anodized, bright anodized, satin chemical bright anodized and electrostatic powder painting options. While silver, yellow, inox, bronze and black anodized color coatings are available, it can also be painted to the desired RAL code with electrostatic powder painting.

EN AW 6463 T6 [AlMg0.7Si]

Place Of Use

The alloy EN AW-6463 is a widely used extrusion alloy, suitable for applications where only modest strength properties are required. Parts can be produced with a good surface quality, suitable for many coating operations. Typical application fields are furniture, finishing materials, windows and doors, car body finishing, facade construction, lighting columns and flagpoles.

Weldability¹

Gas: 3 TIG: 2 MIG: 2

Typical filler materials (EN ISO18273): SG-AlMg5Cr(A) or AISi5, and AlMg3 when the product has to be anodised. Due to the heat input during welding the mechanical properties will be reduced by approximately 50% (ref. EN1999-1).
